

GitHub Profile README Build Log

From prompts to a premium animated developer profile

Author: Ruban Edward | @Ruban-Edward

Repository: github.com/Ruban-Edward/Ruban-Edward

Document date: 4 October 2026

1. Project Overview

This document records the full process of designing the README visuals for the GitHub profile **Ruban-Edward/Ruban-Edward**. Each visual was produced from a dedicated prompt, one at a time, and every asset shares one design system so the profile reads as a single, cohesive developer identity.

Deliverables at a glance

#	Section	Output file(s)	Purpose
1	Hero / ID Badge	id-dashboard.svg	Lanyard ID badge + personal introduction
2	About & Life	about-life.svg	Build-side vs life-side cards
3	Tech Ecosystem	(tech-stack SVG - filename not given in prompt)	Orbital system + categorized stack
4	Contribution Snake	snake.yml (GitHub Action)	Auto-generated light + dark snake SVGs
5	Let's Connect	connect/ heading + 4 badges x 2 themes (10 SVGs)	Social / contact links

Shared design system

Token	Light	Dark
Chip / card fill	#ffffff	#0c1726
Edge / border	#0891b2 (.55)	#67e8f9 (.45)
Title text	#0f172a	#e2f1ff
Sub text	#64748b	#7b8aa0
Accent bar	#0284c7	#38bdf8
Heading text	#0369a1	#7dd3fc
Travelling highlight	#0ea5e9	#a5f3fc
Gold accent	#d4a017	#e8c46a

Typography: -apple-system, 'Segoe UI', Inter, Helvetica, Arial, sans-serif; monospace: 'SF Mono', Consolas, Menlo, monospace. **Aesthetic:** dark premium interface, technical grid, glass-like cards, restrained cyan/blue glow, small gold accents, transparent SVG backgrounds, subtle motion that respects prefers-reduced-motion.

Workflow used

- Prompts were supplied one by one; each produced one self-contained SVG (or workflow file).
- Animation priorities were declared per section so motion feels sequenced, not simultaneous.
- Every SVG is standalone, validated (xmllint-clean) and themed for both light and dark GitHub modes.
- Assets are referenced from README.md using <picture> so GitHub swaps themes automatically.

2. Hero Section - id-dashboard.svg

A premium two-column developer landing hero: an interactive lanyard ID badge on the left and a typography-led introduction on the right.

Left side - lanyard ID badge

- **Entrance:** lanyard and badge drop from above, swing with damped pendulum physics (progressively smaller swings), then settle; secondary movement in strap and clasp.
- **Lanyard:** dark fabric strap with texture and folds, repeating text *RUBAN EDWARD / SOFTWARE ENGINEER / GITHUB / RE-DEV-2002*, realistic metal clasp.
- **Badge content:** RUBAN EDWARD, SOFTWARE ENGINEER, INDIA, B.TECH, @Ruban-Edward, ID RE-DEV-2002, framed portrait, ONLINE status, QR-style code, barcode, gold contactless chip, holographic foil, security-line patterns, rounded glass-like corners.
- **Portrait light:** a small light travels around the portrait frame border in a slow, subtle loop.
- **Holographic sweep:** diagonal foil reflection on settle or pointer interaction - never overpowering text or portrait.
- **Hover:** badge lifts, subtle 3D tilt, lanyard reacts, hologram shifts, portrait light brightens.

Right side - personal introduction

- Status pill with pulsing dot: **OPEN TO COLLABS**.
- Greeting *Hi there, I'm*, then the name **RUBAN EDWARD** as the strongest element - animated cool-tone gradient, revealed by a bottom-to-top rising mask, settling into a gentle shimmer.
- Cycling role: Software Developer, Web Developer, Problem Solver (clean type/delete or transition).
- Quote: "First, solve the problem, then write the code." in distinct typography.
- Pitch: Building practical software, scalable cloud solutions, and intelligent applications.
- Meta row with custom line icons and hover: Location (India), Education (B.Tech), Experience (Software Development), Focus (Cloud - Web - AI).

Animation hierarchy

Order	Animation
1	Badge drop + damped swing
2	Name rising-mask reveal
3	Role cycling
4	Portrait-frame travelling light
5	Open-to-collabs pulsing dot
6	Holographic sweep
7	Metadata hover effects

Avoid: excessive cyberpunk styling, giant icons, clutter, unnecessary statistics, stock UI elements, bright backgrounds.

3. About & Life - about-life.svg

Two equal glass cards that intentionally contrast: **BUILD** (technical, structured) versus **LIFE** (personal, relaxed).
Message: *"I build things, but I'm more than just a developer."*

Left card - Developer / About

- Fake browser window with three control dots and URL bar **localhost:8080/ruban-edward** that illuminates when animation begins.
- Illustration: workspace, laptop, code editor, terminal, cloud/server elements, floating code fragments, blinking `> building... _ cursor`.
- Hover: browser lifts, URL bar glows, cursor more visible, code elements drift.

#	Capability	Description	Icon
01	Build & Engineer	Designing and building practical software solutions.	Code brackets / terminal / gear
02	Cloud & Deploy	Turning applications into scalable cloud-ready systems.	Cloud + deploy arrow
03	Automate & Improve	Creating smarter workflows with automation and AI.	Nodes / workflow / spark

Row hover: icon tile glows, border illuminates, description shifts into focus, a small line travels across the row.

Right card - Life / Hobbies

- Full-width carousel, auto-advances every **4 seconds** with crossfade + slight horizontal slide and caption update.
- Instagram-style segmented progress bars; the active segment fills over 4 s with smooth easing; sequence resets after the last slide.
- Hover pauses the timer and progress, and slightly zooms the image; leaving resumes.

Slide	Caption	Subtext	Motion
01 Football	Football	Game on. Everything else can wait.	Rotating ball, stadium lights, particles
02 Friends	Good Times, Good People	The best memories aren't written in code.	Group silhouettes, cafe, ambient light
03 Eating	Food	Fuel for the next build.	Steam, light movement, parallax

Daily rings: three looping circular rings - Football (~78%), Friends (~64%), Eating (~86%). Values are playful placeholders, not real statistics; rings fill, pause, reset, with soft glow and consistent stroke - not styled as fitness metrics.

Narrative

Left: Build -> Deploy -> Automate. Right: Football -> Friends -> Food. The section is the natural transition from developer identity into the person behind the profile.

4. Technology Ecosystem

Intent: "This is my development ecosystem." A balanced two-column layout - visual storytelling on the left, technical clarity on the right.

Left - interactive orbital ecosystem

- Glowing central core labelled **SOFTWARE ENGINEERING**, pulsing subtly (not flashing).
- Three tilted elliptical orbits - a miniature solar system with slow motion, differing speeds and inclinations, particles, glowing connection lines, atmospheric glow.
- **React** has the most elaborate behavior: it orbits the core while **HTML** and **CSS** orbit React as moons.
- Collision rule: moons must never overlap React, the core, orbital lines, or other nodes.

Tier	Technologies
Core / Featured	React, Python, FastAPI, AWS
Supporting	PHP, Java, CodeIgniter, HTML, CSS, Bootstrap, MySQL, PostgreSQL, MongoDB, n8n, Claude AI

Right - structured technology stack

Glass-like chips (Simple Icons logo + name + thin border + hover glow), grouped under small uppercase headings with thin dividers - styled as a technical specification panel.

Category	Chips
LANGUAGES	Python, PHP, Java
BACKEND	FastAPI, CodeIgniter
FRONTEND	React, HTML, CSS, Bootstrap
DATABASES	MySQL, PostgreSQL, MongoDB
AUTOMATION & AI	n8n, Claude AI
CLOUD	AWS

- **Sequential highlight:** a border glow travels Python -> PHP -> Java -> FastAPI -> CodeIgniter -> React -> HTML -> CSS -> Bootstrap -> MySQL -> PostgreSQL -> MongoDB -> n8n -> Claude AI -> AWS; only one or two chips glow at once.
- **Hover:** border brightens, icon scales, background lightens, glow grows; the hovered chip temporarily takes priority.
- **Layout:** keep a clear vertical gap - orbits must not invade the stack panel.
- **Responsive:** desktop two columns; tablet reduces orbit size and gap; mobile stacks orbit above stack and simplifies geometry while preserving the React -> HTML/CSS moon relationship.

5. Contribution Snake - snake.yml

A GitHub Actions workflow generating the contribution snake in both light and dark profile themes, then publishing to an **output** branch.

Setting	Value
Name	Generate Contribution Snake
Triggers	Daily cron "0 0 * * *", workflow_dispatch, push to main
Permissions	contents: write
Runner / timeout	ubuntu-latest / 5 minutes
Step 1	Platane/snk/svg-only@v3 (user: Ruban-Edward), two SVG outputs
Step 2	crazy-max/ghaction-github-pages@v5, target_branch: output, build_dir: dist

File: .github/workflows/snake.yml

```
name: Generate Contribution Snake

on:
  schedule:
    - cron: "0 0 * * *"
  workflow_dispatch:
  push:
    branches:
      - main

permissions:
  contents: write

jobs:
  generate:
    runs-on: ubuntu-latest
    timeout-minutes: 5
    steps:
      - name: Generate snake SVGs
        uses: Platane/snk/svg-only@v3
        with:
          github_user_name: Ruban-Edward
          outputs: |
            dist/github-contribution-grid-snake.svg?palette=github-light&color_snake=#d4a017&color_dots=#e2e8f0,#bae5fc
            dist/github-contribution-grid-snake-dark.svg?palette=github-dark&color_snake=#e8c46a&color_dots=#1b2638,bae5fc
      - name: Publish to output branch
        uses: crazy-max/ghaction-github-pages@v5
        with:
          target_branch: output
          build_dir: dist
        env:
          GITHUB_TOKEN: ${ secrets.GITHUB_TOKEN }
```

README snippet

```
<picture>
  <source media="(prefers-color-scheme: dark)"
    srcset="https://raw.githubusercontent.com/Ruban-Edward/Ruban-Edward/output/github-contribution-grid-snake-dark.svg" />
  
</picture>
```

Important

- Run the workflow once manually: **Actions -> Generate Contribution Snake -> Run workflow**. This creates the **output** branch; the README images will not load until it exists.
- Colour values use an unencoded # as requested; if the Action ever fails to parse them, URL-encode as %23.

6. Let's Connect - connect/

Dark and light SVG sets for the contact section, transparent background and xmllint-clean.

Heading (heading-light.svg / heading-dark.svg)

viewBox "36 48 170 22" containing exactly an accent rect (x40 y52 w3 h14 rx1.5) and the text "Let's Connect" (x52 y64, 12px, weight 700, letter-spacing 3, heading colour).

Badges (270 x 64, rx 16 chip)

Icon disc on the left tinted with the brand colour (.1 fill, .35 stroke), small gold bar above the title, bold 15px title, 9px mono sub text, arrow in the right corner, and a short highlight travelling around the border (stroke-dasharray with pathLength=100, 5 s loop, disabled under prefers-reduced-motion).

File pair	Title	Sub text	Brand (light / dark)	Icon
github-*.svg	GitHub	@Ruban-Edward	#181717 / #e2f1ff	Octicon mark-github
linkedin-*.svg	LinkedIn	in/ruban-edward	#0A66C2 / #5aa9f0	LinkedIn mark
portfolio-*.svg	Portfolio	ruban-edward.github.io	#167D72 / #3fc4b4	Globe
email-*.svg	Email	rubanedward769@gmail.com	#BB3A32 / #f06a60	Envelope

README snippet

```
 <!-- or wrap in <picture> like the badges -->

<a href="https://github.com/Ruban-Edward">
  <picture>
    <source media="(prefers-color-scheme: dark)" srcset="connect/github-dark.svg">
    
  </picture>
</a>
<a href="https://www.linkedin.com/in/ruban-edward/">
  <picture>
    <source media="(prefers-color-scheme: dark)" srcset="connect/linkedin-dark.svg">
    
  </picture>
</a>
<a href="https://ruban-edward.github.io/">
  <picture>
    <source media="(prefers-color-scheme: dark)" srcset="connect/portfolio-dark.svg">
    
  </picture>
</a>
<a href="mailto:rubanedward769@gmail.com">
  <picture>
    <source media="(prefers-color-scheme: dark)" srcset="connect/email-dark.svg">
    
  </picture>
</a>
```

Tip: for the heading, use the same <picture> pattern with heading-dark.svg as the dark source and heading-light.svg as the fallback.

Verification checklist

- Run xmllint --noout on every SVG.
- Render a preview of both themes and compare chip contrast.
- Confirm the travelling highlight stops under prefers-reduced-motion.
- Click-test each of the four links.

7. Final Assembly & Checklist

Suggested repository layout

```
Ruban-Edward/  
|-- README.md  
|-- id-dashboard.svg  
|-- about-life.svg  
|-- (tech-stack).svg  
|-- connect/  
|   |-- heading-light.svg    heading-dark.svg  
|   |-- github-light.svg     github-dark.svg  
|   |-- linkedin-light.svg   linkedin-dark.svg  
|   |-- portfolio-light.svg  portfolio-dark.svg  
|   |-- email-light.svg      email-dark.svg  
|-- .github/workflows/snake.yml
```

Suggested README order

- 1. Hero (id-dashboard.svg)
- 2. About & Life (about-life.svg)
- 3. Technology ecosystem
- 4. Contribution snake
- 5. Let's Connect (heading + 4 badges)

Go-live checklist

Step	Done
Commit all SVGs and connect/ folder to main	☐
Add .github/workflows/snake.yml and push	☐
Run the workflow once to create the output branch	☐
Verify all images load in light and dark GitHub themes	☐
Check mobile rendering of the profile	☐
Verify the four Connect links	☐

Note: GitHub renders SVGs in README as images, so CSS/SMIL animations run but JavaScript does not. Hover and pointer interactions described in the prompts therefore depend on the host - on GitHub, expect the autonomous animations (swing, reveal, carousel, rings, orbits, travelling highlights) and treat hover effects as progressive enhancement for standalone viewing.

Please share any further prompts and I will extend this log with new sections.
